

Space Pilot™

The intelligent solution

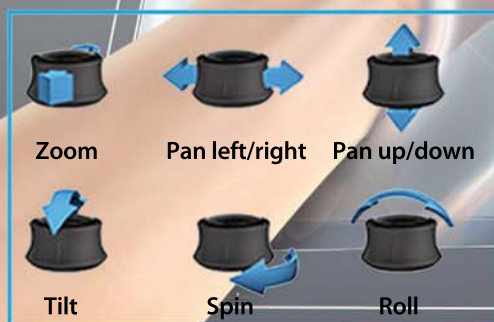

Fly through your 3D world with SpacePilot, the world's first intelligent motion controller. Its adaptive sensing technology practically reads your mind! 21 speed keys store frequently used commands for convenient one-touch access. Switch between applications or tasks and the relevant commands display instantly on the LCD.

Extends your Reach

SpacePilot rocks and rockets way beyond the mouse. It becomes a virtual extension of yourself, allowing you to effortlessly pan, zoom, and rotate simultaneously through 3D models and scenes, while you edit with your mouse. Its graceful style and flawless function help you soar to new levels of creativity.

Why choose SpacePilot

- Boosts productivity by over 30%, while reducing mouse usage by 50%
- Unlocks the power of your 3D applications with 21+ speed keys
- Automatically adjusts functions on keys as applications change
- Lets you access keyboard modifier keys without lifting your hand from the controller
- Provides instant positioning of models and scenes with View Keys
- Soft-coated, sculpted palm rest provides a glove-like feel; work in comfort!

System Requirements:

Microsoft Windows 2000 or Windows XP

USB 1.1 or 2.0 interface

Intel Pentium- or AMD processor-based system

20MB of free disk space for software installation
